## PROFESSIONAL SUMMARY

Data Analyst and aspiring Data Scientist with experience in machine learning, backend application development, and business analytics. Skilled in Python, SQL, Flask and data-driven problem solving through real-world analytics and ML projects. Experienced in building backend systems, ML pipelines, and analytical dashboards with exposure to industry-evaluated technical project assessments at IIT Madras.

---

## EDUCATION

### Delhi University – Zakir Hussain College

B.Sc. (Hons) Mathematics | 2020 – 2023 | CGPA: 7.06

### IIT Madras (Online) Diploma in Data Science

Diploma in Data Science | 2021 – Present | CGPA: 7.41

---

## PROFESSIONAL EXPERIENCE

Manager | Business Analyst & Operations | S and S Brothers | Apr 2024 - Present

- Manager | Business Analyst & Operations
- S and S Brothers | Apr 2024 – Present
- Analyzed B2B and B2C sales data using Excel dashboards and trend analysis to support revenue decision-making.
- Built KPI tracking systems for sales volume, inventory turnover, and operational reporting.
- Supported forecasting and supplier negotiations through cost and margin analysis.
- Implemented structured workflows for inventory monitoring and reporting efficiency.

Data & Operations Intern | Kerala Technology Expo 2024 (KTX Global Wave)

Jan 2024 - Mar 2024

- Managed and cleaned operational datasets involving 200+ companies, delegates, and speakers.
- Generated analytical reports and dashboards supporting planning for 1,000+ event participants.
- Improved registration and feedback data quality through structured collection workflows.
- Coordinated data-driven communication and operational reporting for event management.

---

## CERTIFICATIONS

- DELOITTE Australia's Data Analytics Job simulation using Tableau. [🔗Certificate](#)
  - IIT MADRAS Advanced Certificate in Machine Learning & Data Science. [🔗Certificate](#)
-

---

## TECHNICAL SKILLS

- **Programming & Tools:** Python, SQL, R, Excel (Advanced Functions, Pivot Tables), SQLite, Flask, FastAPI, Docker (basic), Git.
  - **Mathematics & Statistics:** Probability, Statistics, Linear Algebra, Linear Programming.
  - **Data Science & ML:** Pandas, NumPy, scikit-learn, Data Cleaning, Feature Engineering, Regression, Classification, NLP, Forecasting, Model Evaluation.
  - **Visualization & Reporting:** Excel Dashboards, PowerPoint, Google Sheets, Tableau (Deloitte Job Simulation).
- 

## PROJECTS

### Placement Portal – Backend Web Application

- Flask, SQLAlchemy, SQLite, Flask-WTForms, Flask-Login
- Built a multi-role placement management platform supporting Admin, Student, and Company workflows using Flask Blueprints architecture.
- Designed relational database models and approval workflows using SQLAlchemy ORM and SQLite.
- Implemented authentication, role-based access control, secure form validation, and application tracking systems.
- Developed modular backend components for placement drives, student applications, admin approvals, and blacklist management.
- Structured reusable backend architecture using controllers, decorators, and database abstraction layers.
- Successfully completed an IIT Madras Modern Application Development project achieving an overall score of 87% through technical viva assessments by domain and industry experts.
- Click on : [App-Dev Project](#) for the project report . [GitHub: Placement Portal](#) .

### Machine Learning & NLP Projects

#### **Python, scikit-learn, NLP**

- Built machine learning pipelines for housing price prediction, customer behavior analysis, and movie review sentiment classification.
- Performed exploratory data analysis, preprocessing, train-validation splitting, feature engineering, and hyperparameter tuning.
- Applied NLP techniques including text preprocessing, vectorization, and supervised classification models for sentiment analysis.
- Worked with regression, linear models, Naive Bayes, KNN, SVM, ensemble methods, and neural network approaches as part of an IIT Madras Machine Learning project workflow.
- Delivered an IIT Madras Machine Learning & NLP project evaluated by domain and industry experts through technical viva assessments, achieving a good overall evaluation score.
- [GitHub: Price-Prediction](#) ; [GitHub: Customer-Predict](#)

### Business Data Management Project

- Analyzed real-world business inventory and sales datasets to identify operational inefficiencies and support data-driven decision-making.
  - Created dashboards and analytical reports for inventory tracking, sales analysis, and revenue insights.
  - Worked with structured primary business data for forecasting and operational analysis.
  - Evaluated through Viva assessments by domain and industry experts, achieving an overall score of 80%. [GitHub: Business-Data-Management-Project](#)
